

Boilermaker/iron carpenter m/f

Boilermaker/iron
carpenter m/f

Job and assignments

He/she works at early stages of the ship building process. His/her duties include cutting and shaping the pieces that will make up the main parts of the ship (panels, decks...).

The boilermaker/iron carpenter bends steel sheets from the blueprints and drawings as specified in the instructions by the Study department. His/her duties include various steps in the building process, from marking, cutting and bending through to the final assembly.

Work environment

The boilermaker manufactures new pieces or repairs broken parts in the workshop. He/she can also work on board. He/she works on the floor or at height and usually in a team. Such tasks are occasionally performed in confined spaces and require absolute compliance with safety instructions. His/her duties also require moving parts with handling equipment (hoists, cranes...).

Inter-personal and expert skills

- You are competent in reading scale drawings
- You know the assembly techniques and the tools for cutting, shaping and assembling
- Your mind is set on quality, safety and deadlines

Training

CAP	▶ <i>Metalwork design and manufacture</i>
BAC	▶ <i>Technician in industrial boiler works</i>
BAC +2	▶ <i>Metalwork design and manufacture</i>
Continuing training	▶ <i>Assembler</i> ▶ <i>Boilermaking</i>
